Fund Investment Summary and Objectives

Our Investment Strategy and Philosophy

Shares are evaluated, not by a fluctuating ticker or a graph on a screen, but by what they represent, a certificate of ownership. We seek great businesses that are well run and managed, trading at a discount to their intrinsic value. We follow the adage that the return of an investment is determined not by the exit price but by the price one pays.

Fund Objective

The objective of the Aylett Equity Prescient Fund is to maximise long term capital appreciation by investing in assets on behalf of clients that will preserve their purchasing power in real terms and earn a satisfactory return on that capital.

Fund Universe

The Aylett Equity Prescient Fund is required to invest a minimum of 80% of the portfolio in equities at all times, with offshore asset exposure being limited to 25%.

Fund Risk Profile

The Fund has a moderate to high risk profile as it is actively managed across global equities, cash and listed assets.

Aylett Equity Prescient Fund vs. JSE All Share TRI

Total Return Index is net of fees and assumes dividends and distributions are reinvested. Cumulative outperformance since inception is 93.4%. For illustrative purposes only.

Fund Manager Commentary:

2016 for was a very good year for all the funds managed by Aylett & Co. Our performance this year was largely as a result of investments made during periods of underinvestment. It was at these times that our investment philosophy came under intense scrutiny and some of our long-term clients started to question our abilities, even withdrawing funds owing to the client pressures they faced.

Buffett has consistently stated that you are right in investing when the facts are right. It is pleasing that we stuck by our investments because ultimately the facts on which those investments were made were right. Perhaps what I find most satisfying about the success of 2016 was the character and the strength shown by the team to stand by their decisions. We were not dogmatic and when the facts changed we were fast to act. Our decision to bring foreign cash back to South Africa and to lighten exposure to foreign investments were good examples.

Our investment in South African stocks proved to be timeous and we were surprised by how quickly these stocks recovered. In hindsight, they simply became too cheap in dollar terms. Many of our stocks turned out to be winners but what excites us more is that on a five year view they appear to be reasonably valued and with some investments still having significant upside.

In conclusion, last year was a good year for the funds. We have no idea what the future will hold but in the short term we think it is reasonable to expect some relative underperformance. That being said, the portfolio does have some counters that could surprise on the upside. In the long term, we expect the funds to continue to do well and as always we will use any pessimism to either add to existing stocks or to introduce new investments.

Walter Aylett

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The CIS may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the Net Asset Value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the Net Asset Value price as agreed to. Money Market Funds are priced at 13:00 and all other Funds are priced at either 15:00 or 17:00 depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the Manager on request.

For any additional information such as fund prices and application forms, please visit www.aylett.co.za.

Risk Profile

Medium / Medium - High:

- These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios
- In turn the expected volatility is higher than low risk portfolios, but less than high risk portfolios
- The probability of losses are higher than that of the low risk portfolios but less than high risk portfolios
- Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios

Glossary

Annualised performance: Annualised performance shows longer-term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The Net Asset Value represents the assets of a Fund less its liabilities.
