

AYLETT EQUITY PRESCIENT FUND - A1
MINIMUM DISCLOSURE DOCUMENT
30 SEPTEMBER 2020

FUND INVESTMENT SUMMARY AND OBJECTIVES

Our Investment Strategy and Philosophy

Shares are evaluated, not by a fluctuating ticker or a graph on a screen, but by what they represent, a certificate of ownership. We seek great businesses that are well run and managed, trading at a discount to their intrinsic value. We follow the adage that the return of an investment is determined not by the exit price but by the price one pays.

Fund Objective

The Aylett Equity Prescient Fund is a general equity portfolio. The Manager in selecting securities for the portfolio will seek to follow an investment policy which will secure for investors an optimum overall return, that is to say the steady growth of income and the preservation of capital in real terms.

Fund Universe

The Aylett Equity Prescient Fund is required to invest a minimum of 80% of the portfolio in equities at all times, with offshore asset exposure being limited to 30%.

FUND RISK PROFILE

The Fund has a moderate to high risk profile as it is actively managed across equities, cash and other listed assets both domestically and in foreign markets.

FUND FACTS

Fund target	To provide long term growth in both capital and income over time.
Fund category	South African Equity General
Inception	3 July 2006
Benchmark	JSE ALL Share Total Return Index

ASSET ALLOCATION

FUND MANAGER COMMENTARY:

BACKGROUND

Not much has changed since the June fact sheet was written. We are three months further into the covid-19 pandemic, at a lower lockdown level, and the plans proposed and actions undertaken by our government continue to be uninspiring. A larger margin of safety is required in our thinking and so the only companies qualified to come into our investing universe are the ones that are able to deal with many things thrown at them. That's not to say we do not want to invest in South Africa, it is just that we have raised the bar a bit more given the state of everything we see around us.

Notably, we have seen two local companies, namely Omnia Holdings Ltd (Omnia) and African Oxygen Limited (Afrox), attracting foreign investment through either an outright sale or the purchase of part of the business respectively, at significantly higher prices than the market is placing on them. As investors this gives us great confidence of the existing pure-play South African assets that we have in the portfolio as well as substantiating and supporting our view that South Africa remains undervalued. There are multiple reasons for these low valuations; most importantly that local government recovery plans remain uninspiring, their track record of implementation poor, all while unemployment and despair continues to worsen. This means weak macroeconomic forecasts and thus so many South Africans are taking their investing offshore in search of better prospects.

THE PORTFOLIO

We have seen that life moves on; people are still trying to earn a living and seeking to spend their money on necessities, other consumer goods and entertainment. We will hopefully look back in time and say that this was a very good opportunity to buy certain assets. Since June the assets we own, and the results they have produced, have been very encouraging in this regard. We are now starting to see evidence of businesses return to normalisation in terms of valuation as the market starts to look forward, for example Spur Corporation Ltd is now at approximately 90% of last year's price levels.

People are starting to go out, they are starting to travel, the restrictions are being relaxed slowly and life goes on...and so too will stock markets go on. This indicates to us that the latent value in the fund is extreme. If you combine all the small investments we have made, roughly 30% of the portfolio is in South African domestic equities, and 50% of that we feel is cheap. Looking at the foreign component of the portfolio, which makes up roughly 60% effective exposure, the prospects for the dollar-revenue rand-cost models, for example Royal Bafokeng Platinum and AECI Limited, look good. The Omnia deal is quite interesting for AECI in that it shows how valuable AECI's businesses truly are, not that they are identical, but they are in the chemical fertiliser type market. With the exception of the banks, property companies and retailers, some of the pure-play industrial South African businesses will do well even in adverse economic conditions.

INTERNATIONAL

Interestingly in the international component of the portfolio we are starting to see opportunities open up in the US market that weren't there before, such as travel and leisure related companies, which we are busy looking at and over time we think will be quite attractive despite the continuation of the Covid-19 pandemic. We are also working hard to find exposure in certain markets in Asia, and emerging markets given their better growth prospects. Mexico and Brazil, for example, strike us as interesting. We are not experts in those markets, nor do we claim to be, but we are finding attractive companies at good valuations there given how hard their share prices have been hit.

LOOKING FORWARD

In conclusion, we remain happy with the portfolio. The investments trade at a discount to intrinsic value and we are very comfortable about their outlook over the next three to five years. Over the short term it is difficult to say what might transpire; with the US elections in November, Brexit and enough bad news in Europe, markets could weaken. Typically, this gives us hope that our investment style is solid through the cycle. So called growth investments such as Tesla, Microsoft and Tencent are priced as if their positive prospects are certain and stars will continue to align, while so called value investments are priced as if their decline is permanent and unstoppable. There continues to be talk of the 'death of the value investor', as some value investors are closing shop now, which is another sign of the value available in markets if you look in the right areas.

The most telling characteristic of our investment style for us is that we were very disciplined in the sell-off and did not panic. We were measured in our buying when the markets were moving all the way down and we were given continued opportunities to buy more of our favoured stocks at significantly lower levels. We did not sell our shares and we are now near fully invested. We are excited about the future of our investments, run by very competent managers, some of whom are owner-managed, and wait patiently for them to work for us.

Walter Aylett

EQUITY FUND RISK DISCLOSURE:

Default risk:

The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk

The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk

Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk

Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk:

The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk:

Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk:

Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk:

For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk:

A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk:

If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk:

Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

DISCLAIMER:

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The CIS may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the Net Asset Value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the Net Asset Value price as agreed to. Funds are priced at 15:00 (SA). Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the Manager on request.

For any additional information such as fund prices and application forms, please visit www.aylett.co.za.

RISK PROFILE:

Moderate - High:

- Generally, these portfolios hold more equity exposure than any other risk profiled portfolios. These portfolios therefore tend to carry more volatility.
- Expected potential long-term returns could be higher than other risk profiles, in turn potential losses of capital could be higher.

GLOSSARY:

Annualised performance: Annualised performance shows longer-term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The Net Asset Value represents the assets of a Fund less its liabilities.

CPU: Cents per unit
